

What you have

Two self-contained apps that run in any modern browser — no internet, no install.

AET_Academy.html The full learning platform: 19 modules, quizzes, flashcards, lab sims,
5 learning tracks, a final exam + printable certificate, and multi-user accounts.

ElectronWrangler_dist.html Interactive electrical-panel & circuit trainer —
meter live panels, trip breakers, and trace faults on real ACY1 schematics.

Getting started

- 1 Keep all the files in ONE folder.**
The two apps link to each other, so they must stay side by side.
- 2 Double-click index.html (or AET_Academy.html).**
It opens in your default browser. Chrome, Edge, and Firefox all work.
- 3 Create your account on the sign-in screen and start learning.**
Pick a name and role. Your progress saves automatically in the browser.

The two apps work together

Many modules include a hands-on link into the panel trainer:

Open live panel -> opens the module's real ACY1 panel so you can explore it live.

Try a fault challenge -> opens that panel pre-broken — read the symptom and trace the fault.

Back to AET Academy -> in the trainer returns you to the module you came from.

Good to know

Progress is saved in the browser (localStorage), separately for each account.

Multi-user: create accounts on the sign-in screen; a Lead can see the Team Roster.

To reset: Profile -> Reset, or clear the browser's data for this file.

Fully offline: everything runs from your local drive; no data ever leaves the machine.
